26-421 - Modifications of planting strip requirements

LAST AMENDED
4/30/2012

Driveways are permitted to traverse planting strips. Planting strips may be interrupted by utilities and paved areas required for bus stops.

On #zoning lots# containing #schools#, permeable pavers or permeable pavement may be substituted for grass or ground cover, provided that, beneath such permeable pavers or pavement, there is structural soil or aggregate containing at least 25 percent pore space, or other kind of engineered system that absorbs stormwater, as acceptable to the Department of Transportation. Any area improved with permeable pavers or pavement pursuant to this paragraph shall be no less than three feet in width except where necessary for compliance with the Americans with Disabilities Act.
